

THEME DOCUMENT

1- What theme are we using?

The theme we are using here is Neve; this is the child's theme of Hestia.

2- Why this theme ?

We have chosen Neve in this specific case because it is so visual, very practical for developers who wish to create a website from an empty model (header and footer with the **Customizer**; and the body with **Elementor** by adding sections and widgets). They can therefore in this case with a certain freedom modify very largely the whole structure of the site and its design and this by having a very wide range of options for an optimal result. It is also very useful because it helps to prevent errors when updating the parent's Hestia theme.

3- What plugins are we using?

The plugins are:

- Cherry Real Estate
- Contact Form 7
- Elementor
- Orbit Fox Companion

4- What do each of those plugins do ?

- **Cherry Real Estate:** help us to add properties with types areas, prices, features, tags and more ...
- **Contact Form 7:** help us to add a simple contact form to contact the agency with first and last name; address, subject, message and more ...
- **Elementor:** help us to create and modifying pages (body) in particular with new sections and widgets.
- **Orbit Fox Companion:** here is for social sharing module, Gutenberg blocks (we don't need this one here because we're already using Elementor), uptime monitor, analytics integration, template directory module, policy notice, menu icons ...
